

A BA practice that scales — without diluting the standard.

One methodology, one register, one score. Every consultant, every project, every gate on a single pane — with the evidence to defend every decision at audit.

What changes when the practice runs on Quorval

Four capabilities that move a BA team from craft to discipline.

BA Performance Score

Per-consultant scorecard across elicitation quality, requirement clarity, RTM coverage and gate turnaround.

GOVERNANCE 01

Portfolio RAG roll-up

Every project, phase and gate on one screen. Drill from a red status to the exact blocking requirement.

GOVERNANCE 02

Method library

Your BABOK templates, elicitation guides and diagram standards are the defaults. Juniors can't ship off-pattern.

GOVERNANCE 03

4-week onboarding

New hires shadow a signed project, run a mock URS, and hit competency in a month with objective checkpoints.

GOVERNANCE 04

Four ways your practice becomes defensible

One standard, four surfaces. Consistency without turning your BAs into form-fillers.

EVIDENCE ON DEMAND

Audit-ready rooms

Regulator asks "show the decision." Export the meeting clip, requirement, sign-off and RTM in one PDF.
e.g. MHRA inspection prep from 3 weeks to 3 hours.

CROSS-PROJECT INSIGHT

Pattern library

Recurring risks and requirements surface across projects. Codify once, reuse everywhere.
e.g. Same integration gap on 4 accounts → one reusable clause.

CONSISTENT DELIVERY

Standardised gates

Charter, URS, Design, Build, TSR, Go-Live — every project, same shape, same evidence, same sign-off.
e.g. Client audits stop asking "which BA ran this one?"

CAPACITY YOU CAN SEE

Workload heatmap

Who is signed to what, where slack is, where burnout is forming. Reassign before it becomes a delivery risk.
e.g. Rebalance a 6-person team in one meeting.

Seven lifecycle phases, six signed gates

Every project. Every consultant. The same evidence trail, Concept to Operate
