

One platform. Every project.

One governed rhythm.

Quorval replaces the meeting recorder, requirements tool, risk register, change log and e-signature suite — with one AI-native workspace that writes the evidence as you work.

SOURCE OF TRUTH

What one platform actually gets you

Four capabilities that only exist when the tools stop being separate.

Meeting → requirement

Recall.ai capture, AI insight extraction and BABOK-tagged requirement generation in one continuous pipeline.

PLATFORM 01

Requirement ↔ risk ↔ test

Bidirectional RTM keeps every artifact linked. Change one, see the impact everywhere — automatically.

PLATFORM 02

Governed e-signature

21 CFR Part 11 compliant signing with cryptographic hash chains. Any artifact, any gate, any signer combination.

PLATFORM 03

AI-native workspace

Every field, gate and diagram is model-assisted. Not chatbots bolted on — AI is the substrate of the workflow.

PLATFORM 04

Four industries running on the same spine

Regulated or not, the lifecycle and evidence model don't change.

LIFE SCIENCES

GxP-ready delivery

GAMP 5 categorisation, 21 CFR Part 11 signing and TSR gate embedded. No validation add-on required.
e.g. LIMS, MES, CTMS, eTMF programmes.

FINANCIAL SERVICES

Audit-first change

SOX-ready evidence, dual-control approvals and immutable decision logs on every material change.
e.g. Core banking migration, KYC uplift.

ENTERPRISE IT

Programme delivery

Multi-vendor coordination, cross-workstream RTM and unified stakeholder portal on one spine.
e.g. ERP rollout, cloud migration, M&A integration.

PROFESSIONAL SERVICES

Consulting practices

Deliver to a house standard across every client engagement. White-labelable stakeholder portal.
e.g. Big-4 advisory, boutique BA practices.

Seven lifecycle phases, six signed gates
